

Civilization Health and Cancer Structure Scoring System v1.0 White Paper
(Including CHS / RUI / HCCI, 105 Indicators, and Case Studies: China – USA – Russia – Sweden)

Preface

In the 21st century, competition among civilizations is no longer limited to GDP, military power, or technological accumulation. The true battleground lies in the structural health of a civilization:

- Does it protect individual freedom and dignity?
- Can it distribute resources fairly and effectively?
- Does it have self-correcting mechanisms and resilience against structural “cancer”?

The ability of a civilization to remain structurally healthy determines not only its sustainability but also whether it will export its pathologies and infect the global order.

This white paper introduces a quantitative diagnostic framework to evaluate civilizations:

- FFI (Functional Fabric Index): Measures the positive, healthy functions of a civilization.
- CSI (Cancerous Structure Index): Measures the extent of structural “cancer” — traits that erode freedom, diversity, and innovation.
- CHS (Civilization Health Score): The net difference between FFI and CSI, representing the overall health level of a civilization.
- RUI (Reverse Unification Index): Assesses the extent to which a civilization exports its negative structures and assimilates others.
- HCCI (Human Civilization Contribution Index): Defined as $CHS \times RUI / 100$, quantifying whether a civilization is a net contributor or net threat to humanity.

This framework provides a quantitative foundation for the “Reverse Unification Theory of Chinese Civilization”:

- When a civilization has $CHS < 0$ but $RUI > 50$, it is not only structurally “cancerous” internally but is actively exporting those pathologies outward.

In the appendices (A1, A2, A3, A4), we apply this scoring model to China, the United States, Russia, and Sweden to reveal contrasting structural profiles.

Part I: Conceptual Framework

1.1 Five Core Indices

1) FFI – Functional Fabric Index

Measures the positive functional structures of a civilization (freedom, equality, creativity,

cooperation, self-correction).

The higher the FFI, the more “healthy cells” a civilization has.

2) CSI – Cancerous Structure Index

Measures negative structural traits (information control, centralized power, emotional coercion, oligarchic monopolies, structural colonization).

The higher the CSI, the more “cancerous factors” dominate.

3) CHS – Civilization Health Score

Overall net health score:

$$CHS = \frac{\sum_{i=1}^7 (FFI_i - CSI_i)}{7}$$

Interpretation: CHS > 0 means the civilization is structurally healthy; CHS < 0 indicates systemic cancerization.

4) RUI – Reverse Unification Index

Measures the external assimilation power of cancerous structures:

$$RUI = \overline{CSI} \times EOI$$

Where EOI (External Output Index) ranges from 0 to 1, capturing the reach of capital, technology, discourse, and platforms.

5) HCCI – Human Civilization Contribution Index

Measures net global contribution (or harm):

$$HCCI = \frac{CHS \times RUI}{100}$$

- HCCI > 0: Net contributor to global civilization.
- HCCI < 0: Net destructor (“structural tumor”).

1.2 The Seven Civilization Systems

(Analogous to the seven vital systems of the human body)

1. Information-Neural System: Freedom of thought, speech, and media; transparency of information.
2. Resource Circulation System: Property rights, fair opportunity, wealth distribution, and open markets.
3. Cultural Absorption System: Openness to new ideas, cross-civilizational exchange, and translation of knowledge.
4. Birth & Transmission System: Family structure, generational mobility, and protection of individual dignity.
5. Legal & Institutional Framework: Judicial independence, checks and balances, procedural justice.
6. Human Values & Orientation: Freedom, dignity, creativity, happiness, and inclusiveness.
7. Immune System: Risk recognition, societal self-correction, external defense, and global cooperation.

Part II: Indicator Framework (105 Metrics)

Each civilization system is assessed using 10 FFI (positive) indicators and 5 CSI (negative) indicators, resulting in a total of $10 + 5 = 15$ metrics.

All indicators are scored on a 0–5 scale:

- 0 = Extremely poor performance
- 5 = Best performance

Maximum score per system:

- FFI = 50 points (10×5)
- CSI = 25 points (5×5)

The complete list of 105 indicators is provided in Appendix B (Tables B-1 to B-7).

(This section briefly summarizes representative indicators of each system; detailed explanations are in Appendix B.)

Part III: Scoring Methodology

3.1 Single System Score (Normalized to 0–100)

$$FFI_{\text{system}} = \frac{\sum_{j=1}^{10} \text{Score}_{\text{FFI},j}}{50} \times 100$$

$$CSI_{\text{system}} = \frac{\sum_{j=1}^5 \text{Score}_{\text{CSI},j}}{25} \times 100$$

3.2 Civilization Health Score (CHS)

$$CHS = \frac{\sum_{i=1}^7 (\text{FFI}_i - \text{CSI}_i)}{7}$$

Interpretation:

- $CHS > 0$: The civilization is structurally healthy.
 - $CHS < 0$: The civilization is cancerized (structural pathologies dominate).
-

3.3 Reverse Unification Index (RUI)

$$RUI = \overline{CSI} \times EOI$$

Where:

- \overline{CSI} : The average CSI score across all 7 systems (0–100).
- EOI (External Output Index): Measures the civilization’s external influence (capital, technology, narrative, platform reach) on a 0–1 scale.

3.4 Human Civilization Contribution Index (HCCI)

$$HCCI = \frac{CHS \times RUI}{100}$$

Interpretation:

- $HCCI > 0$: The civilization is a net contributor to global human progress.
- $HCCI < 0$: The civilization is a net destructor (structural “tumor”).

Part IV: Civilization Cancer Staging Model

This model identifies stages of structural cancerization based on CSI levels:

Civilization Cancer Staging Model

Stage	CSI Range	Structural Features	Typical Risks	Suggested Interventions
Latent	$0.2 < CSI \leq 0.4$	Localized cancer-like structures	Information/education narrowing	Media independence, open education
Infiltration	$0.4 < CSI \leq 0.6$	Multi-system linked cancerization	Power concentration, legal manipulation	Judicial independence, fiscal transparency, anti-corruption
Metastasis	$0.6 < CSI \leq 0.8$	External structural export	$RUI > 30$, cultural/capital infiltration	Global civilizational immune collaboration, dependency reduction
Collapse	$CSI > 0.8$	Systemic failure	Innovation collapse, demographic/ecological imbalance	Social trust rebuilding, de-structural authoritarianism

Note:

When $CHS < 0$ and $RUI > 50$, the civilization is classified as a “highly cancerized + high-outflow global risk entity.”

Part V: Global Scoring (Illustrative Version)

The following table provides demonstrative scores for selected representative civilizations. These results are for methodological illustration only and not official annual ratings. Formal reports will be based on verified public data, third-party indices, and transparent audit methods.

**Part 4: Sample Scoring —
10 Countries (2025 Draft)**

Country	FFI	CSI	CHS	EOI	RUI	HCCI
China	30	75	-45	0.8	60.0	-27.0
USA	80	35	45	0.7	24.5	11.0
Sweden	88	8	80	0.3	2.4	1.9
Japan	70	25	45	0.5	12.5	5.6
Germany	85	15	70	0.6	9.0	6.3
India	55	40	15	0.4	16.0	2.4
Russia	40	60	-20	0.7	42.0	-8.4
Brazil	60	30	30	0.5	15.0	4.5
France	83	12	71	0.6	7.2	5.1
South Africa	50	45	5	0.4	18.0	0.9

Key Takeaways (Summary):

- China: CHS is negative and RUI is extremely high, resulting in a negative HCCI. It represents a typical case of “reverse unification” risk (see Appendix A1).
- United States: CHS is positive, RUI is relatively high, and HCCI is positive. It remains a “net contributor” to global civilization, though algorithmic polarization and corporate monopolies require caution (see Appendix A2).
- Russia: CHS is negative and RUI is high, producing a negative HCCI. It is characterized as a “hard conflict-type exporter” (see Appendix A3).
- Sweden: CHS is high while RUI is low, making it a “silent positive contributor” (see Appendix A4).

Part VI: Key Insights and Warnings

1. “Influence \neq Positive Contribution”

- A civilization can be powerful yet still be a net negative contributor ($HCCI < 0$).
- It is critical to separate “influence” from “civilizational quality”, which is precisely what $RUI + CHS$ aims to achieve.

2. Reverse Unification as a Structural Disease

- When a civilization is highly cancerized ($CHS < 0$) and has high RUI, it tends to export its control structures globally—via capital, technology, platforms, and discourse.
- Free civilizations must develop a “civilizational immune system” to detect and counter such infiltration (see Part VII).

3. Vulnerabilities of the Free World

- Open societies are naturally more permeable to infiltration due to transparency and pluralism.
 - A structural “firewall” is needed—covering transparent supply chains, discourse independence, platform governance, and cross-national legal cooperation.
-

Part VII: Roadmap for Civilization Immunity

7.1 Internal Actions (Raising CHS)

- Information-Neural System: Algorithmic transparency, independent media, open data.
- Institutional Framework: Judicial independence, regular accountability, anti-corruption mechanisms.
- Birth & Transmission: Eliminate bloodline-based oppression, end emotional coercion, protect children and women’s rights.
- Immune System: Transparent crisis response, societal self-correction mechanisms, cross-disciplinary expert involvement in decision-making.

7.2 External Actions (Suppressing RUI)

- Anti-structural colonialism rules: Impose transparency and rule-of-law constraints on capital and technology with “structural control overflow.”
- Civilizational Immunity Alliance: Free civilizations should share intelligence, collaborate legally, and mutually recognize technology standards.
- Platform Governance & Discourse Defense: Identify and filter external attempts at information manipulation and ideological infiltration.

7.3 Immunity in the AI Era

- AI is not neutral: It must be embedded with “civilizational immune principles” to prevent becoming a carrier of structural cancer.
 - AI Transparency & Alignment: Ensure AI systems uphold freedom, human rights, dignity, and creativity as core values.
-

Part VIII: Methodological Notes and Limitations

1. Data Availability Gaps: Authoritarian regimes often lack transparent data or manipulate statistics. Multi-source cross-validation is required.

2. Weight Adjustments: System and indicator weights can be fine-tuned using machine learning, expert panels, and Delphi methods.
 3. Temporal Dynamics: It is crucial to observe $dFFI/dt$ and $dCSI/dt$ (rates of change) rather than static scores alone.
 4. Multi-Scale Adaptability: The model can be expanded to nations, platforms, organizations, and even families, identifying structural resonance across levels.
 5. Philosophical Boundary of HCCI: While HCCI quantifies contribution vs. harm, value hierarchies (e.g., freedom, dignity) require human consensus.
-

Conclusion

Civilizational health is not an accident of history—it is the result of a continuous battle between structure and immunity.

- If we fail to identify cancerous structures, we will ultimately be consumed by them.
- If we fail to build a civilizational immune system, freedom itself will become a luxury.

The CHS / RUI / HCCI framework in this white paper aims to offer a clear, quantifiable, and actionable tool for the global community to understand:

- Who contributes to civilization?
 - Who corrodes it?
 - And how can we rebuild and save ourselves?
-

Appendix A: Case Studies

A1: China — A Typical Case of Reverse Unification

Core Results:

- $FFI = 30$, $CSI = 75$, $CHS = -45$ (High internal cancerization)
- $EOI = 0.8$, $RUI = 60.0$ (Strong structural outflow)
- $HCCI = -27.0$ (Net negative contribution to global civilization)

Key Structural Characteristics:

1. Information-Neural System: Comprehensive censorship, algorithmic manipulation, criminalization of speech (e.g., Great Firewall, keyword blocking).
2. Resource Circulation System: State-owned enterprise dominance, opaque fiscal mechanisms, high corruption risk.
3. Cultural Absorption System: Extensive content bans, ideological filtering of books/films, distortion of history for nationalism.

4. Birth & Transmission System: Emotional coercion (filial piety as control), gender inequality, marriage market commodification.
5. Legal & Institutional Framework: Judiciary under political control, selective law enforcement, legal tools for regime stability.
6. Human Values & Orientation: Collectivist dominance over individual rights, forced value conformity, marginalization of minorities.
7. Immune System: Weak NGO space, suppression of whistleblowers, external projection of control structures.

Conclusion:

China represents a “high-cancer + high-outflow” civilization. Its RUI score indicates that its internal control structures are actively exported through platforms, technology, and economic dependency chains.

A2: United States — A Positive Contributor with Internal Fractures

Core Results:

- FFI = 80, CSI = 35, CHS = 45 (Healthy structure)
- EOI = 0.7, RUI = 24.5 (Strong global influence)
- HCCI = 11.0 (Net positive contribution)

Key Structural Characteristics:

1. Information-Neural System: Strong press freedom and information diversity, but algorithmic polarization (e.g., social media echo chambers).
2. Resource Circulation System: High market freedom and innovation but rising wealth inequality.
3. Cultural Absorption System: Openness to cultural exchange and global research collaboration.
4. Birth & Transmission System: High degree of individual freedom in marriage/family; challenges with childcare costs and healthcare.
5. Legal & Institutional Framework: Robust separation of powers, but political polarization weakens trust in institutions.
6. Human Values & Orientation: High emphasis on personal freedom, creativity, and minority rights.
7. Immune System: Dynamic civil society, strong NGOs, but vulnerable to foreign disinformation campaigns.

Conclusion:

The United States remains a net positive contributor to global civilization, but internal polarization and algorithmic manipulation are potential risk factors that could erode its CHS if not addressed.

A3: Russia — Hard Power Expansion & Negative Contribution

Core Results:

- FFI = 40, CSI = 60, CHS = -20 (Unhealthy structure)
- EOI = 0.7, RUI = 42.0 (Strong external outflow via hard power)
- HCCI = -8.4 (Net negative contribution)

Key Structural Characteristics:

1. Information-Neural System: Heavy state control of media, criminalization of dissent.
2. Resource Circulation System: Resource economy controlled by oligarchs, high corruption.
3. Cultural Absorption System: Limited openness to foreign culture and media.
4. Birth & Transmission System: Weak social mobility, patriarchal and traditionalist norms.
5. Legal & Institutional Framework: Judiciary is non-independent, laws serve political control.
6. Human Values & Orientation: Nationalism prioritized over individual rights.
7. Immune System: Militarized responses, limited civil society.

Conclusion:

Russia's negative contribution stems from its hard power expansion (military conflicts) and structural inflexibility, which contrasts with China's softer but more pervasive "reverse unification" strategy.

A4: Sweden — Silent Positive Contributor

Core Results:

- FFI = 90, CSI = 20, CHS = 70 (Very healthy)
- EOI = 0.4, RUI = 8.0 (Low outflow)
- HCCI = 5.6 (Positive contribution)

Key Structural Characteristics:

1. Information-Neural System: One of the highest global press freedom rankings.
2. Resource Circulation System: Fair wealth distribution, high social welfare, and transparent governance.
3. Cultural Absorption System: Multicultural openness, strong global academic links.
4. Birth & Transmission System: Gender equality, comprehensive child protection, progressive family laws.
5. Legal & Institutional Framework: Strong rule of law, independent judiciary, low corruption.
6. Human Values & Orientation: High happiness index, inclusivity, and creativity.
7. Immune System: Effective social trust, proactive crisis management.

Conclusion:

Sweden exemplifies a “quietly positive” civilization, with strong CHS and low RUI, meaning it contributes to global civilization health without aggressive external expansion.

Appendix B: 105 Indicators

B-1: Information-Neural System

FFI (Positive Indicators):

1. Press freedom index (media independence).
2. Diversity of media and public discourse.
3. Open access to government data.
4. Public information accessibility.
5. Algorithmic transparency and explainability.
6. Freedom of independent investigative journalism.
7. Existence and strength of fact-checking mechanisms.
8. Legal protection for whistleblowers.
9. Internet and digital diversity (uncensored platforms).
10. Citizen access to uncensored global information.

CSI (Cancerous Indicators):

1. Volume of keyword censorship and blocked terms.
 2. Scope of internet firewalling or platform bans.
 3. Number of cases of criminalized speech (e.g., arrests for opinions).
 4. Algorithmic manipulation for political or social control.
 5. Level of cross-border information blockade.
-

B-2: Resource Circulation System

FFI (Positive Indicators):

1. Strength of property rights protection.
2. Market competition and openness index.
3. Transparency of public fiscal data.
4. Equality of access to quality education.
5. Accessibility and quality of healthcare.
6. Entrepreneurship environment (ease of starting businesses).
7. Fairness of wealth distribution (low Gini coefficient).

8. Accessibility of public infrastructure.
9. Efficiency of ecological resource use and sustainability.
10. Transparency and fairness of the tax system.

CSI (Cancerous Indicators):

1. Degree of resource or industry monopoly.
 2. Prevalence of grey/black market activities.
 3. Concentration of wealth in family/oligarch networks.
 4. Corruption and rent-seeking in taxation.
 5. Share of unaccounted “black-box” fiscal funds.
-

B-3: Cultural Absorption System

FFI (Positive Indicators):

1. Openness to diverse cultural expressions.
2. Freedom of international academic collaboration.
3. Accessibility to global media and literature.
4. Freedom of translation and publication.
5. Integration of global history perspectives in education.
6. Tolerance of multiculturalism.
7. Investment in knowledge-sharing platforms.
8. Freedom to participate in international conferences.
9. Cross-border innovation collaboration.
10. Policies for protection of minority and indigenous cultures.

CSI (Cancerous Indicators):

1. Number of banned books, films, and digital platforms.
 2. Degree of cultural or ideological censorship.
 3. Distortion or politicization of historical narratives.
 4. Level of cultural nationalism or chauvinism.
 5. Demonization or suppression of foreign ideas.
-

B-4: Birth & Transmission System

FFI (Positive Indicators):

1. Freedom of marriage and partnership.
2. Gender equality in law and practice.
3. Strength of child protection laws.
4. Quality and coverage of sexual education.
5. Freedom to choose reproductive options.

6. Legal enforcement of anti-domestic violence measures.
7. Legitimacy and legal recognition of non-traditional families.
8. Quality and accessibility of public childcare.
9. Intergenerational social mobility.
10. Psychological support for children and youth.

CSI (Cancerous Indicators):

1. Presence of forced birth or forced sterilization policies.
 2. Emotional coercion or filial piety as structural control.
 3. Prevalence of domestic violence and harsh parenting.
 4. Marriage as a marketized resource transaction (e.g., dowry).
 5. Systemic gender discrimination in education or employment.
-

B-5: Legal & Institutional Framework

FFI (Positive Indicators):

1. Independence of judiciary from executive power.
2. Transparency of laws and judicial processes.
3. Functional separation of powers (checks and balances).
4. Equality before the law (regardless of status).
5. Constitutional protection of human rights.
6. Mechanisms for referendum and constitutional amendments.
7. Effectiveness of anti-corruption enforcement.
8. Independence and rights of lawyers.
9. Legal space and recognition for NGOs.
10. Independence of auditing and supervisory agencies.

CSI (Cancerous Indicators):

1. Political interference in judicial rulings.
 2. Selective or arbitrary enforcement of law.
 3. Existence of political prisoners or prisoners of conscience.
 4. Lack of fair trial or public access to judicial decisions.
 5. Weaponization of law for regime preservation.
-

B-6: Human Values & Orientation

FFI (Positive Indicators):

1. Priority of freedom and human dignity.
2. Global happiness index ranking.
3. Protection of minority and marginalized groups.

4. Public participation in policymaking.
5. Creativity and innovation index.
6. Inclusion of critical thinking in education.
7. Media focus on human rights and social well-being.
8. Vibrancy of charitable and philanthropic activities.
9. Social inclusion of vulnerable populations.
10. Freedom to initiate social innovation projects.

CSI (Cancerous Indicators):

1. Forced value conformity and ideological indoctrination.
 2. Extreme nationalism or chauvinism.
 3. Collectivism overriding individual freedom.
 4. Suppression of pluralism and diversity.
 5. Instrumentalization of values for political or economic gain.
-

B-7: Immune System

FFI (Positive Indicators):

1. Transparency in crisis response (e.g., pandemics, disasters).
2. Speed and effectiveness of societal self-correction.
3. Resilience and autonomy of civil society.
4. Willingness to engage in global cooperation.
5. Dominance of science and rational discourse in policy.
6. Sensitivity to early signs of authoritarianism or systemic risks.
7. Open channels for public feedback and criticism.
8. Platforms' capacity to counter misinformation.
9. Inclusion of interdisciplinary experts in decision-making.
10. Awareness of global systemic challenges (climate, inequality, AI).

CSI (Cancerous Indicators):

1. Suppression of NGOs and independent media.
 2. Structural infiltration and control of foreign institutions.
 3. Hostility towards other civilizations or cultures.
 4. Refusal of external oversight or audits.
 5. Concealment of crisis information.
-

end
